NOTES Use the additional spaces to write in your own assignments. All times are suggested....work at your own pace and for as long or little as you'd like. The important thing is to focus and have a plan.

If you already know certain subjects then either do them again, use more advanced techniques, move on, or still use the time for that subject to research and progress further.

Not every mentioned lesson will have instruction or information. This is intended to be an inspirational guide to help you plan a fun and worthwhile STEM curriculum to coincide with your general studies set forth by the district and your teachers.

Print this off and use the checkboxes to show your progress throughout the week.

Use the Website above for all corresponding links, videos, information, and more.

Contact me with questions, ideas, or anything else. dustin@shortcircuitrobotics.com Or you can message the facebook page or through the website.
